

A one year (renewable) Post-Doctoral position starting in October is available at the Laboratory of Nanostructured Fluorinated Materials (NFMLab) of the Politecnico di Milano, Italy, in the area of supramolecular interactions occurring between halocarbons and biomolecules within the framework of the European Research Council project “Folding with Halogen Bonding (FoldHalo)”.

The successful candidate has experience in peptide and protein chemistry, supramolecular chemistry, biochemistry, structural biology with a track record of achievements.

The successful candidate will work in a dynamic and international set-up closely collaborating with biotechnologists, chemists, and materials scientists to develop novel halocarbon-biomolecule assemblies with potential as new biomimetic materials and applications. The position will also include short periods of visit to the VTT – Technical Research Centre of Finland, Helsinki.

For applications or more details about the position, please contact pierangelo.metrangolo@polimi.it.
